DETAILED ACTION

Drawings

1. Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g).
2. The drawings are objected to because many of the figures lack reference numerals. Appropriate reference numerals must be added in order to clarify the drawings.
3. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

4. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

6. Claims 1-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Fujita (U.S. Patent 6,115,886). Fujita discloses a hinge including shaft (1, 8) and housing (4, 5, 6) portions. The shaft has a portion (8) carrying a bearing surface (8a) and a portion extends radially beyond

the bearing surface (adjacent 8b). The hinge has an engagement surface (adjacent 6a). The shaft and housing are movable relative to one another such that portion (adjacent 8b) is and is not engaged with the engagement surface (see Figures 1 and 2).

There is a biasing spring (9).

Regarding claims 10 and 11, Fujita is used in electronic devices (abstract, for example).

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional references teach hinges.
